The Troo is specifically designed to vaporize your herb, and not to combust. The 3 preset temperature settings are specifically set to offer 3 different styles of vaporization. The lowest setting, RED, will heat your material to a max temp. of 360°F. At this temperature the material will vaporize more slowly. At the medium setting, GREEN, the material will be heated up to maximum of 380°F. Typically this will result in your contents being heated more quickly and a shorter session. The final heat setting is BLUE, with a max temp. of 420°F. At this temperature, the material will be fully heated and produce the densest amount of vapor.

### REMOVING MOUTHPIECE

Apply pressure from side to side on the Troo!

DO NOT TRY and remove the mouthpiece from the front or the back.

**IMPORTANT:** Always allow mouthpiece to cool down before removing.
